

# Project Profile

## Canyon Creek Heights Condominiums

### SRP AirOutshield™ WALL and SRP 60 UV Tape

Existing cladding was removed, deteriorated wood sheathing was removed and replaced. SRP AirOutshield WALL was installed as the “air barrier”; all seams taped with SRP 60 UV seam tape. Battens and new cladding installed

Address: 13104 DR, Calgary, Alberta

Completion: 2018

Engineer: Entuitive

General Contractor: Syncon Management

Installer: ProWest

## Application

- The AirOutshield WALL system was selected for its performance, versatility and cost effectiveness.
- AirOutshield has an extremely high water vapour permeance.
- It can be applied to a variety of surfaces including existing wood, textured stucco and new wood.
- AirOutshield WALL with SRP 60 UV tape applied to all seams is significantly more cost effective compared to using a self adhered membrane such as SRP AirOutshield SA280.
